

105M: 105M EVAPORATOR

2.8 Cubic Feet Refrigerators

Mermaid's 105M bendable evaporator plate is designed to refrigerate an area with good insulation of no more than 2.8 cubic feet. It is ideal for top and front opening boxes.

The first of the four available bendable evaporator plates manufactured by Mermaid, the 105M is designed with ease of installation in mind. Provided pre-charged and pre-drilled for mounting, the 105M plate is ideal for top or front opening boxes with refrigeration in mind. Each Mermaid evaporator plate is provided with the quick connections pre-installed.

The plate is bendable to a minimum radius of 1.5" and needs to be done accurately and carefully using a 2" PVC pipe and only in the designated bending areas. For optimal performance, it is recommended to mount the plate on the side wall with the inlet/outlet refrigeration tube nearest to the top of the box.

Due to its size, this product is primarily used only for refrigeration and operates most efficiently when maintained in an UN-bent situation.

105M Evaporator Specifications

Dimensions

- L - 12.79" x W - 7.91"

THERMOSTAT TEMPERATURE SETTINGS

Refrigeration:

Warm in/out = 52/42 Degrees F

Freezer:

Cold in/out = 30/16 Degrees F
